

FLINC

ESA Business Incubation Centre Darmstadt managed by cesah

Profile

finc is a dynamic ridesharing service that can be used on smart phones or online, combining GPS and location based capabilities with social networking to offer a dynamic and automated transport method. With the growing need to save

fuel and energy coupled with the surging rise in smart phone usage, flinc is a smart green mobility method, offering a conscious alternative to current transport. flinc AG is privately held and based in Dieburg, Germany.

Products and Services

Through a real-time analysis of traffic movements, flinc is able to arrange seats in cars within a few seconds. It combines GPS and location-based capabilities with social networking to offer a dynamic, safe and automated service that gets you from A to B. A passenger uses his mobile phone, types in his destination and sends the information to flinc. Shortly, flinc finds matching drivers to his destination needs and sends this

info back to the rider. The rider can look at the driver's profiles including price and ride duration. He accepts the driver and within a few minutes a driver will arrive and take the passenger to his destination. A driver gets the ride request directly in the car on his navigation device. With one click he accepts the ride and flinc guides him directly to the passenger.
